Levine: BioShock Infinite's religious themes led dev to consider quitting : Page 2 Subscribe

Jackben
bitch I'm taking calls.
(02-28-2013, 06:02 PM)

There was no dev. Ken Levine was the one considering quitting before having an internal discussion and uniting the split personas of his own fragmented mind.

You play as Booker Dewitt, not religious (at least, it was never mentioned). Comstock (religious) is the leader of Columbia, he's who Levine is talking about.

Since people seem utterly oblivious to reference, I'll post again:

http://en.wikipedia.org/wiki/Anthony_Comstock

"Comstockery is the world's standing joke at the expense of the United States. Europe likes to hear of such things. It confirms the deep-seated conviction of the Old World that America is a provincial place, a second-rate country-town civilization after all." - G.B. Shaw.

No matter what you do there is always going to be people who dislike what you are trying to say. We probably will never know what specifically causes this individual to take offense, but I generally trust Levine in doing what was best for the project, and not change his vision simply because someone didn't like it.

I mean look at Bioshock 1. That villain is an atheist who's philosophy incorporates atheism a fair amount. Arguably though the more important philosophy Ryan holds to is individualism. The game is all about taking that idea to the extreme. Levine has talked about how he isn't religious and agrees with some of Ayn Rands views. I don't see Levine criticizing a philosophy he can sympathize with on a variety of levels (Objectivism), but not with one he's farther from (religious nationalism). I trust him.

I do find this fascinating because i've always wondered if this happens more often in video games and other media. There are a ton of people who work on films and games who have no say in those creative aspects of it. I mean Assassin's Creed outright says religion is bullshit, and yet over 200 people have worked on that game. I know I would have a tough time working on a project that was antithetical to my worldview. Obviously there are lines you draw. If it was a game about the power of faith or some abstract shit I could probably handle it as long as it fell in line with my morals (charity, selflessness etc.), but if you told me I was making a game about the power of faith healing I would probably quit.

The dev was apparently offended at a scene at the end of the game. Not every dev on the team will play the whole game through, and if they do, it could be a while before they do, like now.

Science has always been one of my favorite areas of study, and I'm constantly amazed at whatever the latest breakthroughs are. I really get annoyed at the way religious characters are portrayed in the entertainment mediums. They are generally written by non-religious writers, and reek of inexperience and, honestly, ignorance. I feel the same way about how 99% of minority characters are written in fiction. As a black guy, it grates to constantly see that same portrayal of minorities, and really distracts me. Takers are written with the same level of generalization and ignorance.

If Levine is being honest with this story, then it's great that he at least attempted to understand the perspective of his employee and his character. I'm really looking forward to Infinite either way.

Most writers--and this is a human problem in general--tend to write the most obvious things. If someone's non-religious, and the discussion doesn't come up, then sometimes, the only exposure they have are to the extremists (and they forget that the average--normal--person in America is religious to some extent, and isn't an insane, racist, homophobic, what have you psychopath), so that's what they write.

It's important for good writers to recognize all characters as fundamentally human. Even hyperbolic characters (which are EXTREMELY HARD TO WRITE) must, at their core, be fundamentally human. The point is to exaggerate their human traits, not just portray the obvious parts.

Originally Posted by **guck** >

Levine is one of the few people I'd trust to at least attempt it, but after Bioshock, I can't tell whether he's a bad writer or his characters were deliberately hyperbolic (to more obviously contrast two views).

Originally Posted by **waypoetic** >

It is. People can choose to believe science or not, regardless of science's veracity (at this stage, gonna play the devil's advocate and point out that science has been wrong about things in the past :D).

Some people have the idea that religion and science are mutually exclusive ideas. Some people do not. I believe Figboy79 is in the latter group.

Based on my interactions, many in Europe still like to hear such things (it's an idea which has never really died, and demonstrates how the class system still has influence in Europe more than it ever will in the US), which is why Europeans tend to take such a shine to the more left-leaning Americans (who tend, among other things, to talk about how backwards America is, how stupid the right wing is, and how we should emulate Europe more). It's one of the reasons that I, while sympathizing with many points of the American left, find it something of a challenge to actually join them.

As a writer, I think this observation actively helped me write better characters.

Nope.

One thing I would advise anyone wanting to write do is... Research. If everything you know of a specific type of person is from movies or TV shows, get the hell outside and go meet one. It's not hard to find a Christian or a physicist or any other sort of person. If possible, meet many. And where you can't, start with giving people the benefit of the doubt - don't assume that one aspect of who they are would so overwhelm everything else that you turn them into a caricature.

I really respect Levine for this.

I see a lot of people in that give no second thought of the implications that religious beliefs have on developing a character. I know a lot of people what to be in some politically correct mindset with these sorts of things but that just doesn't happen. You really have to explore things from a vast array of angles to get to any conclusion.

The only other game that I felt maturely dealt with living religions In a respectful way was Assassin's Creed. Granted it made each organization out to be disillusioned, but it did so In a way that called out man's own evil. Not attacking the religion itself. It did show how religion was used as a fuel to drives man's own wickedness.

This certainly increases my respect for the man. **Too many people just seem to run ahead with absurd, offensive caricatures of religious characters** (hi Infamous 2 and Resistance 3!), where they're portrayed as bizarrely superstitious (and not in a positive way, like, say, Native Americans) and incapable of any critical thought.

This kind of caricature tends to come from people who aren't religious themselves. It's a rookie writing mistake. The train of thought is something like "oh, well, religion's obviously fake, so these people can't be logical at all." Problem is, humans are... significantly more complex than that. I live in a very science-driven community, but we also have a high degree of religious individuals here--and yes, there's a significant overlap. Lots of people here who are both religious and scientists. They're very logical, very rational, completely normal humans, not weirdos who think Satan's hiding behind every corner trying to get at them by way of black gay muslim atheists or something, but that's precisely the kind of caricature I see all too often.

As a writer/writer wannabe, I've spent a lot of time studying people, just watching them, how they react to things, why they do what they do, and so on and so forth... and the way religious characters are portrayed is almost *exclusively* the sort of non-existent (unless, maybe, you count Fred Phelps' church or some of the more cult-like Christian offshoots) evangelical types.

I don't think I've ever seen a well-written religious character in games.

Still, even if Levine revised his script, I find myself worrying. Comstock, after all, is a religious bad guy. If he's anything like the characters seen in Bioshock, he'll be, effectively, a hyperbolic literary device. Will he be balanced out with more reasonable characters? If you're having a hard time understanding the concerns I've got here, think of it like this: a writer establishes a 'ghetto' character who exists as an antagonist in the game. His portrayal is hyperbolic, but exists to point out the flaws in ghetto culture (and there are many). At worst, the writer runs the risk of coming across as saying "lol, black people suck," which, of course, isn't true.

This is America. You may see an offensive religious caricature. I see *real* life. :(

The funniest thing about all this is that Levine sees people calling him a liar and just doesn't give a shit. That is detailed very well in his interview with Adam Sessler on Rev3. He makes it clear that the game will speak for itself.

Cartman86

Yes exactly. In reading interviews with Levine post Bioshock he has talked about how he agreed with some of the points of objectivism, but wanted to present a critique of it in the game. The way he chose to do it was to push the scenario to the extreme (science sans values, ultra free market etc.) to show how hard those ideals can be to maintain in the real world. I fucking hate Ayn Rand so i'm not defending objectivism, but i'm just saying I think with Infinite he wants to do the same thing, but from a different extreme. In many interviews about Infinite he has spoken about how he needed to find an mental in with Comstock. He wasn't religious and has never had that experience so he couldn't see why people would have that impulse to follow. Compared to Ryan where he could see some of the reasons why Ryan's philosophy was so attractive. Talking with this guy who wanted to quit (and maybe others according to some interviews in the past) gave him ideas as to why someone would follow this guy. So yeah this will probably be a take down of sorts of religious nationalism, but it will contain if not a sympathetic character than understandable one.

To the people that are saying that this is just a PR stunt. You do realize that Levine disclosing this internal anecdote has put even more pressure over Infinite story and his writing? Now people will scrutinize even further the quality of the writing, how these themes are treated in the game, people will nitpick the smallest detail and discrepancy to try to turn this tale against Levine and the game. Risky PR stunt if it were one. I believe it. Levine is smarter than this.

As someone with many family members, friends, and acquaintances in the scientific community, I have no faith in the scientific method.

It doesn't *matter* anymore. It's for idealists. All that matters is grant money. That's why promising research gets shut down for less-promising research. I watched a guy get his lab taken from him because once, he got a robot and someone else didn't, and when she got promoted, she got back at him for outproposing her.

I've seen people steal research, hush it up (and this isn't, like, conspiracy level stuff, this is just mundane technological stuff the average person doesn't know or care about), ostracize scientists, and do all sorts of petty stuff all in the name of grant money.

The scientific method exists pretty much in name only for most in the scientific establishment.

That's the problem when science is controlled by government and government money. People in the private sector (hi, Elon Musk!) don't have this problem nearly as bad, but most science money is government porkbarreling/university stuff.

Wow, I typoed that. Should have an "are people who." And, since I did qualify it with "people I know," I think it would be a challenge for you to tell me "nope," since your knowledge of my personal experience is limited.

Research is all well and good, but yeah, getting outside, and watching people, listening to them, seeing how they react to things is the best way to learn. All stories are character driven, when you get down to it. Even the event-driven stories had people that made many of those events happen.

People, warts and all, are absolutely awesome, and good writers understand that.

This is America. You may see an offensive religious caricature. I see *real* life. :(

I once had the opportunity to run over Fred Phelps with my car. Trust me, I've been close enough to these people to know what they're like, and I've yet to see someone who could even *begin* to write them properly. It's one of the reasons I've avoided it myself. I can never get them quite right. Instead, it's "oh lord, please protect us from that monster who is probably Satan," or "huh, I have super powers-- GOD MUST HAVE GIVEN ME THESE TO KILL EVERYONE WHO HAS SUPERPOWERS!" Then you've got the people who follow them in droves, and it never makes sense (likewise, the whole Black Ops II plot with people following Menendez doesn't make any sense--writers also rarely seem to understand just why it is people follow leaders. They don't understand Anonymous, and they haven't got a snowball's chance in hell of understanding anyone like Jim Jones).

I see the fucking *gamut* of human experience, and I see bad writers doing little more than creating straw people so they can go "lol, religion? What the fuck is this shit?"

Do you have a link of one such interview? I'd never heard Levine coming down on his views of Objectivism; he always dodged the question in interviews I read, framing BioShock as a Rorschach test for that issue. I'd be interested in hearing his personal take.

Villains are generally extremists of some kind, so I wouldn't really find it hard to believe that one is a religious nut. I highly doubt that the game will end up with anything truly offensive in it.

Side note: Don't let my avatar fool you, I'm not a huge fan of organized religion.

Considering the hundreds of hours he's spent talking about this game, this was possible just a 2 min anecdote that just popped into his head. People want Bioshock infinite stories and any small random thing is going to trumpeted loudly. It's not always a push from the interviewee.

We aren't talking about all Christians, we're talking about American Christians, 26% of which are Evangelicals. That is no small number for what is essentially an extremist group, and the reason why I mentioned the Tea Party is because Columbia was practically built **for** them.

Firstly, the antagonist is the "bad guy," the player is the protagonist. This can, of course, be subverted through an unreliable narrator.

Secondly, your statement is profoundly ironic given your username. Religion is the poetry of man's soul.

To the people that are saying that this is just a PR stunt. You do realize that Levine disclosing this internal anecdote has put even more pressure over Infinite story and his writing? Now people will scrutinize even further the quality of the writing, how these themes are treated in the game, people will nitpick the smallest detail and discrepancy to try to turn this tale against Levine and the game. Risky PR stunt if it were one. I believe it. Levine is smarter than this.

I don't think it is a designed PR stunt. I see it in the same way I see any given thing Randy Pitchford says - he is taking a story that may be true and making it sound like more than it was. Then he parlays that in to an endorsement of his own game's writing shortly before it comes out, a game plagued by a very publicly troubled development cycle, pushing a very "auteur hero" narrative.

It raises an eyebrow, if nothing else.

Though, who knows, maybe I am entirely wrong and it happened exactly as explained and he is not using the story as a marketing tool or for prideful boasts about his work. That'd be great. But my

instinct is telling me otherwise and I'm not trying to convince anyone else that they should agree with me.

Funfax: I've been to a Tea Party rally, just to see what it was like.

They're often nice people. Tend to clean up after themselves. Really courteous and polite. Sometimes loud, and occasionally you'll get the fringe person who takes things to the extreme... but that happens everywhere.

Yeah, I've seen the same news reports everyone else has. They're not spinning an entirely fictitious narrative... but they doing what we might call unprofessional levels of exaggeration. The Tea Party is often portrayed as a boogey man, and as a moderate, I find the representations made by my liberal friends to be entirely reprehensible on the matter. This is a fairly long-standing problem, though. My father knew some people who were hired to protest some guy showing up at a university a while back. The students were all "meh?" and the people who were hired didn't care, but the local papers, who apparently hired the protestors, were basically trying to drum up news because they didn't approve of the school bringing the guy to town.

It's a pretty common tactic in more than just politics, of course. A union has recently come into town and started hiring people (not getting union members, but just random people) to hold up signs around town that say "SHAME ON [various companies]! LABOR DISPUTE!" It's weird—I'm mentioning a lot of behaviors that are somewhat off-topic, and I'm sorry for that. I just find all this stuff and how it all connects to be absolutely *fascinating*.

Would love to see someone write about this stuff with more maturity and intelligence than I ever could.

I misworded myself, and having received a PM about it and having seen your post, I'm going to try to edit that post to clarify.

Let's say that I think the scientific method is what everyone should follow, and that I think few, if any people actually do so anymore.

If their goal was to garner more interest from fence sitters and those who kind of stopped paying attention, then it worked. My curiosity is piqued by wanting to see how such issues are handled. Which is what a game like this should be doing to you even before playing it... just like with the first one. I suddenly want to play this again, after losing interest over the troubled development. #178

Serious question. If your original antagonist created such an extreme response such as to elicit a resignation letter from someone immediately after encountering him, isn't that a sign of a good antagonist? You don't want people, at least in some cases, to like your antagonist. I don't see why he should be afraid about offending religious people considering Comstock comes off as a racist, turn of the century tent revival-like preacher or a Jim Jones-like character. He's the bad guy. You should probably be offended by him.

If what Levine said is true, maybe the dev was just offended by a poorly written character? I mean, if your main antagonist is a religious-like leader, if you don't have any experience with those figures then I imagine the character probably rang hollow. Religious leaders and preachers can have a profound effect on people. If Comstock just came off as a maniac, maybe he just wasn't that well written to start with. Nobody who followed Jim Jones probably though they'd end up in a commune in Africa (Edit: South America. I'm an idiot) drinking poisoned Kool Aid when they first joined his church, but how did they end up there? There's a certain power religious zealots can have over people that's almost like a spell. I grew up in Bible country, so I've seen this first-hand.

I didn't mention any other country. My point was that even if you just say only American Christians are all crazy, you're still wrong. I'm not saying that there aren't sizable groups with questionable beliefs, but it's ignorant to claim that there are no (or even few) Americans who hold religious beliefs without appearing to be insane.

When did I ever accuse anyone of being insane? Apart from referring to Evangelicals as extremist? If anything, a sizeable group of American Christians/religious people aren't stupid, they're just too easily manipulated by figureheads like Rush Limbaugh, Jerry Falwell up until his death and Karl Rove who I will quite gladly say are batshit insane.

Originally Posted by **Remachinate**

You can suggest I implied that all you want but you certainly misinterpreted it. You can't tell me that a Tea Party Rally wouldn't draw in a fair amount of religious zealots. Notice I said **fair amount**, not all. I am in no way suggesting all american christians are crazy, but I will refute anyone who tries and suggest that the crazy minority are completely irrelevant and uninfluential. Fox News is proof enough of that.

#186

I personally dislike Evangelicals, but I don't know any of them who have love for Falwell.

Rove was somebody nobody cared about until a documentary about how he helped Bush into the White House came out on PBS. Then he started showing up a lot more in the news and got vilified crazy amounts. He's a guy who's good at his job; only difference between him and other people like him is that he's a Republican. He's not special by any means.

(the above should indicate that I have little love for anyone in American politics)

I think, in an attempt to be more empathetic than thou with piles of anecdotal evidence that nobody really gives a shit about, people are conveniently forgetting that the extreme religious right has been the most destructive, and loudest, voice in American politics for the last few decades. I don't see this as being an indictment of the religious (Hey, I know decent religious people as well! Wow-neat!), but commentary on the perverse blend of capitalism, nationalism and religion that's stunted and plagued public policy and political discourse in recent times.

Wow. I can't think of a better way to kill my interest in a game than to tell me how powerful the religious content is/was (even if it's fairly limited to one part.) #195

That said, I wasn't going to buy this game anyway so I guess I can forgive him. LOL.

Dipswitch

Member
(02-28-2013, 07:06 PM)

Sounds like Levine did the right thing. If the game content is polarizing to the point that it offended someone so severely in the extremely small sample group the game was exposed to, I can only imagine how it would be viewed when exposed to the wider audience. #196

Not saying you necessarily need to censor the hell out of content to try and please everyone. But if there's a way to get the same point across without that content, it's far better to go that route. No sense pissing sales away needlessly.

faridmon

Kudo's to Levine for trying to meet the fella in the middle, with the added benefit of further realizing a character. #198

Originally Posted by **DocSeuss**

This certainly increases my respect for the man. Too many people just seem to run ahead with absurd, offensive caricatures of religious characters (hi Infamous 2 and Resistance 3!), where they're portrayed as bizarrely superstitious (and not in a positive way, like, say, Native Americans) and incapable of any critical thought.

This kind of caricature tends to come from people who aren't religious themselves. It's a rookie writing mistake. The train of thought is something like "oh, well, religion's obviously fake, so these people can't be logical at all." Problem is, humans are... significantly more complex than that. I live in a very science-driven community, but we also have a high degree of religious individuals here--and yes, there's a significant overlap. Lots of people here who are both religious and scientists. They're very logical, very rational, completely normal humans, not weirdos who think Satan's hiding behind every corner trying to get at them by way of black gay muslim atheists or something, but that's precisely the kind of caricature I see all too often.

As a writer/writer wannabe, I've spent a lot of time studying people, just watching them, how they react to things, why they do what they do, and so on and so forth... and the way religious characters are portrayed is almost *exclusively* the sort of non-existent (unless, maybe, you count Fred Phelps' church or some of the more cult-like Christian offshoots) evangelical types.

I don't think I've ever seen a well-written religious character in games.

Still, even if Levine revised his script, I find myself worrying. Comstock, after all, is a religious bad guy. If he's anything like the characters seen in Bioshock, he'll be, effectively, a

hyperbolic literary device. Will he be balanced out with more reasonable characters? If you're having a hard time understanding the concerns I've got here, think of it like this: a writer establishes a 'ghetto' character who exists as an antagonist in the game. His portrayal is hyperbolic, but exists to point out the flaws in ghetto culture (and there are many). At worst, the writer runs the risk of coming across as saying "lol, black people suck," which, of course, isn't true.

I agree with all of that, well put.
